Developer at Standard Chartered GBS, Chennai

Skills

Programming Languages: C/C++, Python, TypeScript, SQL, Bash

Development: HTML/CSS, React.js, Flask, REST APIs, Pandas, Numpy, PySpark

Databases: MySQL, MongoDB, Firebase

Blockchain Technologies: Solidity, Hyperledger Fabric, Ethers.js, Hardhat

Other Tools: Docker, Git, n8n, Strapi CMS, Tableau

Education

MIT ADT University, Pune

B.Tech Computer Science

2021 - 2025

Relevant Courses: Data Structures, Database Management, Operating Systems, Network Security, Cryptography

Experience

[Standard Chartered GBS, Chennai, India](#)

Development Engineer

Sep 2025 - Present

- Developed and maintained **15+ data operations automation solutions** using Python, Pandas, and PySpark, reducing manual effort and decreasing processing time by up to **70%**.
- Optimized large-scale data processing workflows using **PySpark** to efficiently process datasets containing **millions of bank records**, improving execution performance by approximately **40%**.
- Migrated legacy **SAS-based workflows** to **Python**, improving maintainability, reducing technical debt and increasing process times.

[Ztudium, London \(Remote\)](#)

Software Developer Intern

Jan 2025 - Jun 2025

- Built **automation workflows** to ensure AI-generated content remained **consistent and aligned with organizational standards**.
- Engineered modular, event-driven pipelines using **n8n** to connect AI models, third-party APIs, and internal services, resulting in faster and more reliable automation.
- Integrated **Strapi CMS** with custom APIs (**written in GO**), enabling the content team to dynamically refine and customize AI-generated outputs on demand.
- Extensively researched and developed **soul-bound tokens (SBTs)** for **digital identification of business owners**, enhancing trust, authenticity, and ownership verification within digital platforms.

[AccelChain, Pune](#)

Full-Stack Blockchain Developer Intern

July 2024 - Sep 2024

- Designed and deployed multiple **secure Solidity smart contracts on Ethereum and Polygon mainnets** for production-ready use cases.
- Revamped legacy dApp architecture by migrating from **Web3.js & old React stack** to a modern **Ethers.js and optimized React.js UI**, improving maintainability and reducing page load times by **30%**.
- Developed seamless front-end integrations with smart contracts using **Ethers.js**, ensuring secure and responsive user interactions.
- Facilitated collaborative DevOps practices by leading **cross-functional team efforts**, maintaining high-quality code with Git and issue-based workflows.

Projects

MBP-10 High Frequency OrderBook Simulation (C++, CMake, GTest):

- Developed a **MBP-10 order book simulator** handling **buy, sell, update, and delete orders** efficiently under high-frequency conditions.
- Optimized the system to achieve **microsecond-level order matching**, mimicking real-world trade execution speeds.
- Simulated realistic market conditions with high-frequency order flows and measured system performance in terms of latency and throughput designed to handle possible edge cases with maximum efficiency.

Veritas Supply Chain Management System (React.js, Node.js, JavaScript, Google OAuth, MongoDB):

- Engineered a full-stack, role-based supply chain system with integrated **OAuth2 authentication**, improving **transparency and data security**.
- Developed with **MongoDB Atlas**, React.js, and Express backend, integrating **Google OAuth-based user management** with hashmaps for secure ID mapping and auditability.
- Live project: <https://veritasbyshreyash.onrender.com>
